

## Description

Exocet Diesel Power Restorer is a specially formulated fuel additive designed to break down and disperse hard lacquers and internal diesel injector deposits (IDID) to bring fuel flow and engine power back to optimum levels quickly.

## Features

- Restores power that can be lost in modern diesel engines
- Problems resolved with minimal downtime
- Works within one tankful of fuel
- Potential fuel economy benefit

## Application

Modern diesel engines use highly precise injection technology to help deliver optimum driving performance efficiently and with reduced emissions. Over time, deposits can build up in diesel fuel injection systems - reducing engine power, especially in the presence of biodiesel components. The deposits can be very thin layers of lacquer or metal salts stuck tenaciously to critical engine parts that restrict fuel flow. Symptoms of such problems are:

- Noticeable reduction in power
- Engine misfires at idle
- Power surges

The additive is used 'online' on a running engine and is typically added as part of a routine service.

All exocet™ branded products are available in a range of sizes to 1,000 litres

One 200ml bottle of Exocet Diesel Power Restorer treats 100 litres of Diesel
